

This installation will automatically upgrade the database to version 97.

EMS - about version 9.5

This document describes all the news in the current release.

The paragraph numbers below corresponds to the CRQ numbers used by GEL.

Time to upgrade the SQL engine Firebird

With this release, we switch from the old version of Firebird (FB 1.5) to a newer version: Firebird 2.5 (FB 2.5).

This upgrade is mandatory for all users of EMS and is effective immediately.

The new release of EMS and all releases following will ONLY work with FB 2.5.

With this release we terminate all old versions. No support will be given for versions prior to 9.5.

Upgrading the EXE file is exactly like before. The only difference is internal in the way the program works with the SQL server.

Install visit

In case you want GEL to do the setup on site - please contact us for a quotation.

Install remotely

In case you want GEL to help you with the setup we can do it via Teamviewer.

Connect with GEL about a preferred time slot.

Documentation

For full documentation on how to perform the upgrade please see the document:
